

BRIDGING THE ENGINEERING-MEDICINE GAP

HIL BIOMEDICALS & SYSTEMS LTD

Comprehensive Healthcare Software Solutions &
Specialized Medical Equipment Portfolio.

Software & Digital Health

EMR, HMIS, RIS, PACS, LIMS, and Facility
Infrastructure systems connecting clinical and
operational workflows.

Biomedical Equipment

Diagnostic imaging, clinical laboratory
instrumentation, patient monitors, ventilators,
and surgical systems.

Executive Portfolio & Vision

Connecting clinical workflows, medical diagnostics, hospital operations, and biomedical assets into a unified healthcare environment.

Software First — Connected When Needed

Our software portfolio stands on its own as a robust, scalable digital health framework. Where patient care requires direct data from medical devices, we engineer the integration layer so your software and medical equipment operate as one synchronized engine.

Dual Engineering Synergy

One unified project with two specialist areas: our software division manages patient records, laboratory results, radiology imaging, and maintenance workflows, while our equipment division supplies, commissions, and calibrates the physical clinical modalities.

Clinical Information

Digital medical records and hospital administration systems that empower clinical teams to capture, retrieve, and share patient information instantly across departments.

Diagnostics & Imaging

Enterprise imaging archives and laboratory systems supporting radiology and pathology teams with instant study retrieval and analyzer communication.

Hospital & Clinical Information Systems

The core software foundations for patient care coordination and facility operations.

01 EMR

Electronic Medical Records

Connects clinical records across all patient touchpoints.

- Patient digital registration & charts
- Consultation & diagnosis records
- E-Prescriptions & order entry
- Clinical history & treatment notes
- Vitals tracking & allergy alerts

02 HMIS

Hospital Management Information System

Hospital-wide administrative and financial coordination.

- Appointments, Admissions & Bed management
- Billing, Invoicing & Insurance (NHIS)
- Pharmacy & Store inventory control
- Departmental shift rostering
- Executive financial & operational reports

03 HFMS

Hospital Facility Management System

Managing physical plant, infrastructure, and non-clinical spaces.

- Facility asset tracking & room allocation
- Preventive plant maintenance schedules
- Digital work orders & repair dispatches
- Utility & resource consumption tracking
- Hospital housekeeping workflows

Diagnostic Information Systems

Advanced platforms powering medical imaging, radiology reporting, and clinical laboratories.

01 RIS

Radiology Information Systems

Optimizing radiology department workflows from scheduling to report distribution.

- Radiology scheduling & patient arrival
- Modality worklist integration (MWL)
- Radiologist structured reporting
- Examination tracking & billing

02 PACS

Picture Archiving & Communication System

High-speed medical image archiving and diagnostic viewing.

- Full DICOM standard compatibility
- Web-based diagnostic image viewer
- High-speed retrieval across hospital network
- Long-term secure image archiving

03 LIMS

Laboratory Information Management System

Automating pathology and laboratory testing pipelines.

- Sample barcoding & accessioning
- Direct analyzer bidirectional interfacing
- Automated QC and audit trails
- Immediate result delivery into EMR

Biomedical Equipment & Facility Assets

Managing the operational lifecycle, maintenance schedules, and uptime of clinical machines.

01 EMS — Equipment Management Systems

The critical software bridge that tracks and protects every physical biomedical device in your hospital.

- Comprehensive medical equipment registry with QR tags
- Planned Preventive Maintenance (PPM) automated scheduling
- Calibration records & safety compliance certification
- Fault reporting, repair ticketing & downtime monitoring
- Depreciation, total cost of ownership & lifecycle records

02 SFMS — School & Campus Facilities

Specialized facility management software designed for educational institutions, medical schools, and labs.

- Campus building, classroom, and lab space allocation
- Preventive structural and equipment maintenance
- Asset and inventory tracking across departments
- Service requests and work order resolution workflows

How Software Connects to Equipment

The software remains the control center; physical equipment connects seamlessly where data translation adds clinical value.

The Integrated Health Ecosystem

By connecting software standards (HL7, DICOM, REST APIs) with clinical devices, your hospital eliminates manual transcription errors, accelerates diagnosis, and ensures 100% data traceability.

Imaging Modalities → RIS/PACS

CT, MRI, Digital X-Ray, Ultrasound, and C-Arm systems feed diagnostic images directly into PACS while pulling patient worklists from RIS.

Laboratory Analyzers → LIMS

Automated Hematology, Biochemistry, and Electrolyte analyzers transmit test results directly into LIMS and doctor EMR charts.

Patient Monitors → EMR

Vital signs from bedside monitors, pulse oximeters, and ICU ventilators can be streamed into digital nursing observation flowsheets.

Biomedical Devices → EMS

Every clinical device is logged in the EMS software database for routine PPM calibration, service logs, and maintenance alerts.

6-Stage Implementation & Support

From initial workflow consultation to live deployment, staff training, and continuous technical support.

01. Assess & Consult

We review your clinical workflows, patient volumes, existing infrastructure, and departmental needs.

02. Solution Design

Customizing software modules, access permissions, billing codes, and hardware connectivity.

03. Configure & Install

Setting up servers, digital workflows, forms, user accounts, and hospital management dashboards.

04. Device Integration

Connecting diagnostic imaging modalities, lab analyzers, and medical machines to the data network.

05. Clinical Staff Training

Hands-on training for doctors, nurses, lab technicians, radiologists, and administrative teams.

06. 24/7 SLA Support

Local Ghana technical support, preventive software updates, routine troubleshooting, and enhancements.
